

AEG Electric Tools Uses FloEFD to Create Cool Power Tools Faster

- AEG's produce more than 100 different types of tools under two brands: AEG Power Tools and Milwaukee Electric Tools
- The different exterior designs cause different internal airflows that would take a long time to test and modify to ensure proper performance
- Using FloEFD early in the design process AEG were able to get the engine to run 20% cooler much faster than before

"We chose FloEFD because it is easy to use. Using FloEFD, we are able to fine-tune our designs to reach an optimized design much faster"

Markus Wörner, Design Engineer, AEG Electric Tools GmbH
